

# ABOUT CUBICFARM

CubicFarm Systems is a Canadian B2B Ag-Tech business, helping farmers grow crops more quickly and profitably in an environmentally sustainable and conscientious way. CubicFarms achieve this by selling their clients a turn-key solution - part equipment and part service.

Founded by farmers and targeting the new *crop* of tech entrepreneurs, CubicFarms engaged 360Pros to propose a virtual tour production solution for both the Cubic System and Hydrogreen feed machine. With these systems, CubicFarm are targeting entrepreneurs with no farming experience, but want to get into a tech-based industry to make a contribution to the community and do something sustainable.

**The virtual tours need to address the following with relation to the CubicFarm product & service offering being showcased:**

What does it do?

How easy is it to implement?

How can I build a business around it?

What does 'from seed to store' mean?
